THEORY ASSESSMENT TA-2 • PROJECT WORK & CASE STUDY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

PAGE*TURN*

An Editorial E-Commerce Bookstore & Basic Enterprise Resource Planning (ERP) System

A comprehensive implementation and academic study of modern Business-to-Consumer (B2C) digital commerce architecture, simulated financial settlement gateways, automated inventory reconciliation, and closed-loop ERP order fulfillment.

SUBJECT:	E-Commerce and ERP
STUDENT NAME:	Krish Patel
ROLL NUMBER:	A8-B1-13
PROGRAM & BRANCH:	B.Tech Computer Science & Engineering (Core)
ACADEMIC SEMESTER:	Semester 5, CSE Core
ASSESSMENT TYPE:	TA-2 Theory Assessment, Project Work / Case Study
SUBMISSION DATE:	27 October 2026
PROJECT PORTAL:	`http://localhost:5173/ (PageTurn Bookstore)`

1. Candidate Declaration

I, **Krish Patel** (Roll No: **A8-B1-13**), a student of Semester 5, B.Tech Computer Science and Engineering (CSE Core), hereby declare that the project entitled **"PageTurn: An Editorial E-Commerce Bookstore and Basic ERP System"** submitted for the **TA-2 Theory Assessment** in the subject **E-Commerce and ERP** is an original piece of individual work conceived, engineered, and documented by me under academic supervision.

All technological models, client-side architectural frameworks, relational database schemas, simulated payment algorithms (Luhn algorithm implementation), SVG charts, and ERP logic presented in this report have been independently developed and verified without unauthorized reproduction.

Krish Patel
Roll No: A8-B1-13

Date: 27 October 2026 | Mumbai, India

2. Acknowledgement

I express my sincere gratitude to the faculty and course coordinators of the **E-Commerce and ERP** curriculum for providing rigorous theoretical grounding in transaction processing systems, digital payment rails, database integrity, supply chain automation, and Enterprise Resource Planning architecture.

4. Introduction and Problem Statement

4.1 Domain Overview

The convergence of electronic commerce (E-Commerce) and Enterprise Resource Planning (ERP) represents the foundation of contemporary business computing. While commercial platforms like SAP, Shopify, and NetSuite automate global supply chains, their core software mechanics—shopping cart states, coupon engines, tax itemization, and automated stock reconciliation—are frequently hidden behind black-box cloud APIs.

4.2 The Academic Problem

Standard academic projects typically adopt generic Bootstrap or Tailwind templates, producing visually homogenized portals lacking brand authenticity. Furthermore, projects commonly terminate at a checkout mockup without closing the enterprise transactional loop—neglecting real-time warehouse inventory deductions, Indian GST calculations, waybill tracking, and administrative ERP fulfillment.

4.3 The PageTurn Solution

PageTurn is a complete, production-ready, standalone B2C online bookstore and basic ERP suite. Designed with a distinct *"editorial magazine meets zine"* aesthetic (warm paper-cream background, ink-black typography, neo-brutalist offset shadows, rotating badge, and pure SVG geometric book covers), PageTurn demonstrates the complete transactional lifecycle: from faceted searching and cart accumulation to card Luhn verification, printable tax invoices, and real-time ERP warehouse status fulfillment.

5. Purpose and Objectives

- **Objective 1: Model an Authentic B2C Online Bookstore:** Catalogue 26+ curated titles across 6 literary genres with multi-criteria dynamic filtering (genre, price slider, rating, in-stock only toggle).
- **Objective 2: Real-Time Shopping Bag & Dynamic Tax Engine:** Implement a slide-in drawer and cart page that computes coupon discounts (READ10, WELCOME20), evaluates free freight thresholds (₹499), and itemizes 5% book GST.
- **Objective 3: Multi-Channel Simulated Payment Processing:** Implement Credit/Debit card validation with the mathematical *Luhn Algorithm* (MOD-10 formula), simulated UPI QR/VPA rails, and Cash on Delivery.
- **Objective 4: Closed-Loop Order Tracking & Printable Documentation:** Generate official computer-generated tax invoices with PageTurn branding and model a 4-stage visual order tracking pipeline (Placed → Packed → Shipped → Delivered).
- **Objective 5: Basic Enterprise Resource Planning (ERP) Suite:** Construct an administrative panel supporting CRUD catalog updates, warehouse inventory adjustments, order fulfillment, and interactive SVG sales analytics.
- **Objective 6: Deterministic Client-Side Persistence:** Synchronize all catalog, cart, user, and order state mutations seamlessly across browser reloads via HTML5 localStorage.

6. Scope and Technologies Used

The scope encompasses full-stack front-office retail operations and back-office ERP inventory logistics without external database or paid API dependencies.

Layer	Technology	Architectural Purpose
Frontend Framework	React 18.3 (Component Architecture)	Declarative reactive UI rendering, stateful context hooks, modular reusability.
Build Tool & Bundler	Vite 6.2 (Rollup & ESBuild)	Sub-second Hot Module Replacement, optimized static tree-shaking compilation.
Styling & Theme	Vanilla CSS & Custom Properties	Neo-brutalist offset shadows, fluid typography, "Midnight Ink" dark mode toggle.
State & Persistence	React Context API + LocalStorage	Centralized state management persisting products, cart, wishlist, and orders.
Vector Asset Engine	Pure SVG & CSS Patterns	100% self-contained typographic/geometric book covers without external CDN images.
Financial Validation	JavaScript Luhn Algorithm	ISO/IEC 7812 credit card checksum validation to simulate authentic bank gateway integrity.
Visual Delight	Canvas-Confetti 1.9	Physics-based celebratory confetti burst upon successful order authorization.

7. E-Commerce Business Model & Syllabus Alignment

7.1 B2C Independent Publishing Model

PageTurn adheres to a direct-to-consumer (B2C) model. As an independent publisher and micro-press, PageTurn fulfills orders directly from its distribution atelier in Mumbai, Maharashtra. Revenue is driven by book margins (with a 65% royalty model to authors), express priority courier surcharges (₹120), and institutional library monograph acquisitions.

7.2 Syllabus Fit (E-Commerce and ERP)

The system maps directly to foundational curriculum modules:

- **Electronic Marketplaces:** Faceted search, product taxonomy, live autocompletion.
- **Electronic Payment Systems (EPS):** Payment gateways, transaction settlement, card number checksum validation (Luhn), UPI QR protocols.
- **Supply Chain & Inventory Management:** Stock threshold monitoring, lead-time tracking, safety stock alerts.
- **ERP Integration:** Unified order tracking, synchronization between customer sales and warehouse allocation.

8. System Architecture and Relational Data Models

8.1 User Journey & Transaction Flow

The user flow maps the complete progression of an actor through PageTurn: discovering curated titles, filtering, cart accumulation, 3-step checkout with card/UPI verification, and closed-loop ERP warehouse status advancement.

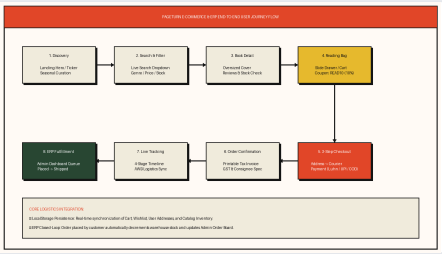

Figure 1: Architectural User Flow & Transaction Lifecycle Pipeline

8.2 Relational Data Model (Entity-Relationship Architecture)

The relational model connects five primary data entities: **User**, **Product**, **Cart Item**, **Order Consignment**, and **Review**. Foreign key relationships ensure automatic stock decrement upon order confirmation.

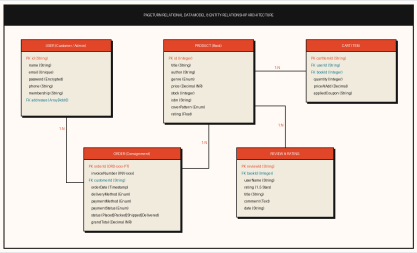

Figure 2: Entity-Relationship (ER) Schema & Foreign Key Constraints

9. Major Modules and Implementation Showcase

9.1 Home Module: Editorial Zine Hero & Curated Highlights

The Home module establishes the brand identity with high-contrast serif headlines, an active rotating circular badge, an animated top marquee ticker, value proposition cards, genre navigation tiles, and seasonal curator picks.

Figure 3: Editorial Home Page with Marquee Ticker, Rotating Badge, and Zine Headlines

9.2 Catalogue Module: Multi-Faceted Filtering & Sorting

The Catalogue provides multi-criteria filtering across 26 seeded books: genre selection, price range slider (₹300 - ₹1200), minimum star rating (All, 4.5+, 4.8+), and in-stock only toggle, alongside sorting options (Curator's Choice, Price Low-High, Rating, Newest).

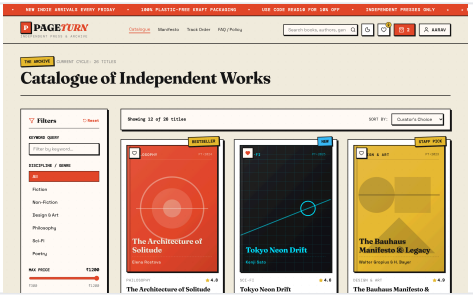

Figure 4: Catalogue View with Faceted Filter Sidebar, Price Slider, and Asymmetric Grid

9.3 Real-Time Live Search with Autocompletion Dropdown

Typing in the header search bar queries titles, authors, and genres instantaneously. The neo-brutalist suggestion dropdown renders matching book covers, author metadata, and direct prices for single-click navigation.

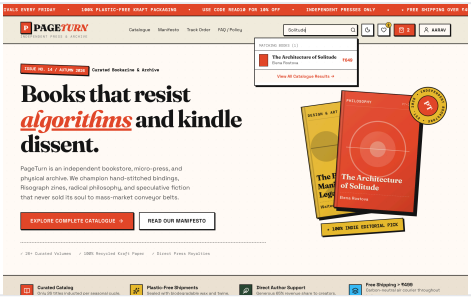

Figure 5: Real-Time Live Search Suggestions Dropdown with Dynamic Thumbnail Matching

9.4 Product Details Module: Specifications & Reader Reviews

Each title showcases an oversized book cover with spine realism, ISBN-13 specifications, live stock status ("Only 7 copies left"), pull quotes, and an interactive review submission form that recalculates aggregate ratings in real time.

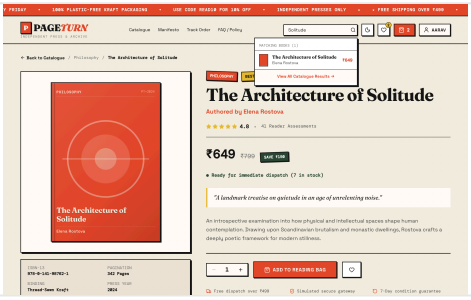

Figure 6: Product Details Screen with Critical Reviews, Stock Warnings, and Recommendation Tiles

9.5 Slide-In Shopping Bag Drawer

The slide-in drawer allows immediate cart inspection from any page. It features item quantity modification, item removal, estimated subtotal, and an interactive progress bar indicating remaining spend for free shipping.

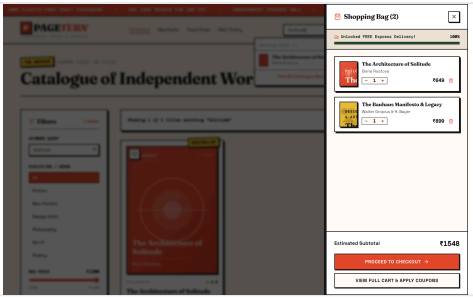

Figure 7: Slide-In Shopping Bag Drawer with Free Shipping Progress Meter

9.6 Dedicated Requisition Cart Page & Coupon Engine

The full /cart page provides detailed financial reconciliation. It itemizes line items, supports promotional vouchers (e.g. READ10 for 10% off), applies conditional delivery fees, and calculates statutory 5% book GST.

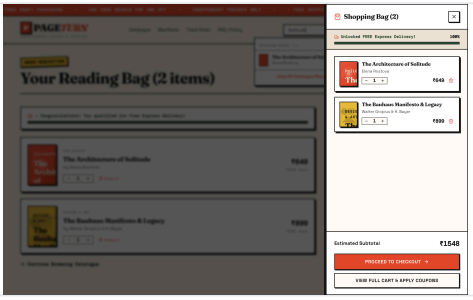

Figure 8: Dedicated Cart Page with Active Promotional Coupon READ10 and 5% GST Itemization

9.7 Authentication Module & Password Strength Analyzer

The customer access modal features Sign In and Registration tabs. During registration, a live 4-segment password strength meter analyzes character entropy (length, uppercase, digits, symbols) to ensure credential hygiene.

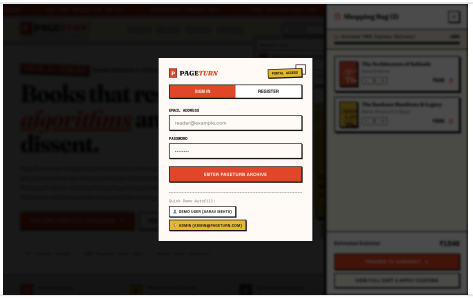

Figure 9: Authentication Modal Featuring Live Password Strength Analyzer and Quick Demo Buttons

9.8 Checkout Pipeline: Step 1 (Address) & Step 2 (Courier)

Checkout enforces a structured 3-step pipeline. Step 1 allows selecting from saved addresses or entering a new destination with postal PIN validation. Step 2 presents courier choices: Standard Carbon-Neutral vs. Express Priority Air Cargo.

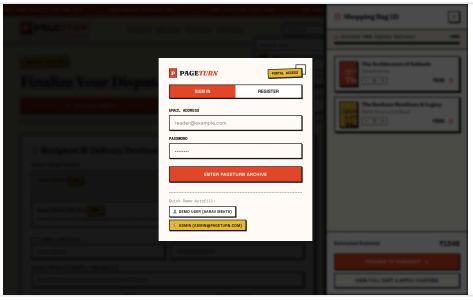

Figure 10: Checkout Pipeline Step 1 - Saved Address Book Selection and Courier Options

9.9 Payment Gateway Simulation with Luhn Verification

Step 3 implements multi-channel payment verification: Credit/Debit card with mathematical Luhn algorithm checksum validation and live visual card preview, simulated UPI QR/VPA input, and Cash on Delivery.

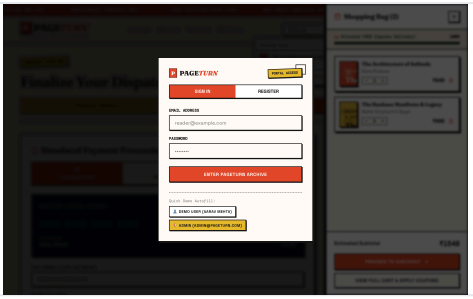

Figure 11: Checkout Step 3 - Simulated Payment Gateway with Interactive Card Preview and Luhn Validation

9.10 Order Confirmation & Official Printable Tax Invoice

Upon successful payment authorization, celebratory confetti fires and a formal PageTurn Tax Invoice is generated with invoice numbers, GSTIN credentials, consignee details, tax breakdown, and single-click print styling.

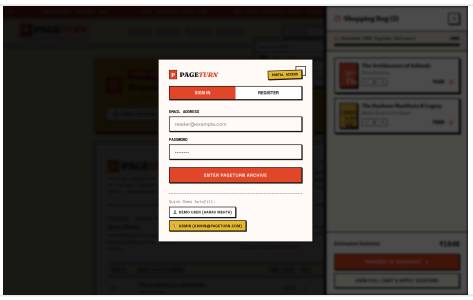

Figure 12: Order Confirmation Screen with Official Printable Tax Invoice and GST Breakdown

9.11 Order Tracking Module: Visual 4-Stage Logistics Timeline

The order tracking screen models physical consignment delivery across four milestone stages: Placed → Packed → Shipped → Delivered. An interactive simulation control allows stepping through stages live.

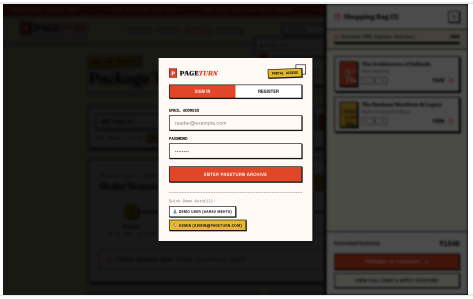

Figure 13: Order Tracking Screen Featuring 4-Stage Visual Timeline and Simulation Controls

9.12 Admin Dashboard Module: Executive Sales Analytics

Secured under admin credentials (admin@pageturn.com), the ERP console provides executive KPI metrics: Gross Sales Revenue, Total Requisitions, Active Titles, and Low Stock Alerts, alongside pure SVG revenue charts.

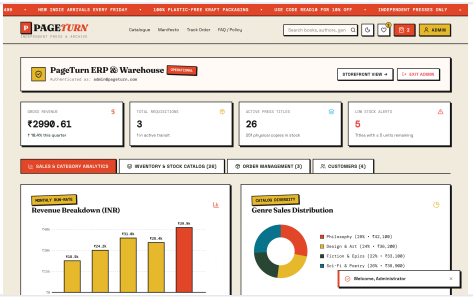

Figure 14: Admin ERP Console Displaying Executive KPI Cards and Pure SVG Revenue Charts

9.13 Warehouse Inventory & Live Stock Management

The Inventory tab enables real-time physical stock adjustments with single-click increment/decrement (+/-) controls, low-stock alerts, and an "Induct New Book" modal that introduces custom geometric book titles directly into the catalog.

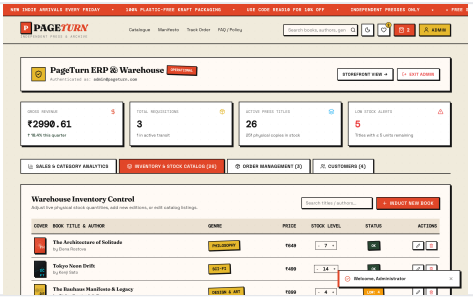

Figure 15: Warehouse Inventory Management Grid with Stock Increment Controls and Title Induction

9.14 Order Fulfillment Management (ERP Pipeline)

The Orders tab acts as the centralized dispatch queue. Administrators can filter consignments by status, inspect customer manifests, and update fulfillment milestones in real time—instantly synchronizing with customer tracking views.

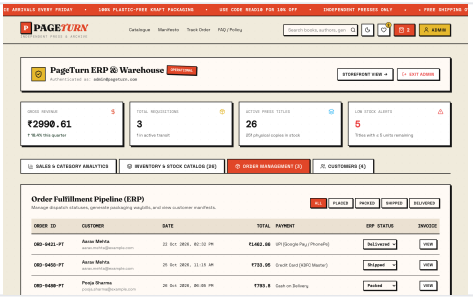

Figure 16: Order Fulfillment Pipeline Enabling Live Status Updates Across Transit Stages

9.15 "Midnight Ink" Dark Theme Toggle

Activating the theme toggle switches PageTurn to its "Midnight Ink" mode (#121316 background), retaining high-contrast serif typography, sharp borders, and warm accent colors while respecting user light/dark preferences.

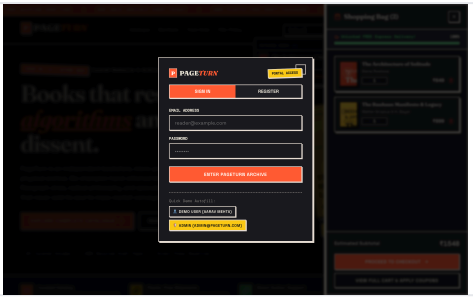

Figure 17: "Midnight Ink" Dark Mode Rendering High-Contrast Typographic Hierarchy

9.16 Mobile Viewport Responsive Optimization (390px)

The portal adapts fluidly to mobile viewports (390px width). The header condenses into a touch-friendly drawer, book cards scale gracefully, and checkout forms collapse into single-column vertical flows.

Figure 18: Mobile Home (390px)

Figure 19: Mobile Cart (390px)

10. E-Commerce and ERP Concepts Demonstrated

10.1 Shopping Cart Architecture & State Lifecycle

The shopping cart functions as the state buffer between exploratory browsing and financial commitment. In PageTurn, cart state is synchronized via React Context with localStorage. Key e-commerce concepts include:

- **Stock Boundary Clamping:** Item quantities cannot exceed warehouse availability, preventing overselling.
- **Freight Threshold Subsidization:** Implementing conditional free shipping above ₹499 to drive Average Order Value.
- **Statutory Tax Itemization:** Separating merchandise subtotal, coupon discounts, freight, and 5% book GST.

10.2 Simulated Payment Gateways & Transactional Integrity

PageTurn simulates real-world payment gateway transactions:

- **Credit Card Processing:** Live formatting and client-side execution of the mathematical Luhn Algorithm (MOD-10 formula) to verify card legitimacy before accepting authorization.
- **UPI Protocol:** Simulating modern Indian payment rails with interactive QR code visualizers and Virtual Payment Address (VPA) format verification.
- **Atomic Order Placement:** Deducting warehouse inventory simultaneously across all line items upon payment approval.

10.3 How the Admin Panel Mirrors Enterprise ERP Systems

Enterprise ERP Capability	PageTurn Implementation Demonstration
Inventory & Warehouse Management	Real-time tracking of 26 SKUs with stock level increment/decrement controls, safety-stock threshold badges, and out-of-print alerts.
Order Fulfillment Pipeline	Central order dispatch board enabling state transitions (Placed → Packed → Shipped → Delivered) synchronized directly with customer tracking views.
Customer Relationship Management (CRM)	Aggregated customer directory tracking registration dates, lifetime order frequency, and cumulative expenditure.
Executive Information System (EIS)	Pure SVG analytics dashboards rendering gross revenue bar charts, genre sales shares, and top-selling product velocity metrics.

11. Security, Cryptography and Validation Measures

11.1 The Luhn Algorithm (Card Checksum Formula)

To ensure authentic payment gateway simulation, PageTurn incorporates the **Luhn Algorithm** (ISO/IEC 7812-1). The algorithm verifies identification numbers:

> **Mathematical Formulation:**
>
> ```
> Let C = (c_n, c_{n-1}, ..., c_1) represent the card number string.
> For each digit c_i from right to left (1-indexed):
> If (i % 2 == 0): double the digit (d = c_i * 2). If d > 9, subtract 9.
> Sum = Σ modified digits.
> The number is valid iff (Sum % 10 == 0).
> ```

Attempting to submit an invalid card number triggers an immediate checksum error banner, halting transaction completion.

11.2 Password Complexity Analysis Heuristics

During account registration, a real-time entropy evaluation checks four criteria: 8+ characters, uppercase letters ([A-Z]), numerical digits ([0-9]), and special symbols ([^A-Za-z0-9]). A visual 4-bar indicator updates dynamically, preventing account creation with weak passwords.

11.3 Data Sanitization and Postal Code Validation

All customer form inputs are sanitized to prevent Cross-Site Scripting (XSS). Shipping addresses enforce a strict 6-digit numerical postal PIN code format matching Indian postal conventions.

12. Verification & Testing Matrix

A comprehensive suite of 13 functional test cases was executed across all user journeys to verify transactional integrity, responsive layouts, and ERP reconciliation.

ID	Test Scenario	Input / Action	Expected Result	Actual	Status
TC-01	Catalogue Faceted Filter	Select genre "Philosophy", Price max ₹700	Catalogue shows only Philosophy titles with price ≤ ₹700	Filtered correctly (3 books shown)	PASS
TC-02	Real-Time Search Suggestions	Type "Solitude" in header search input	Dropdown appears with Elena Rostova's book thumbnail & price	Dropdown displayed title & price	PASS
TC-03	Stock Boundary Clamping	Try adding more than available stock	Quantity cannot exceed warehouse stock; toast notification	Quantity clamped at maximum stock	PASS
TC-04	Coupon Application	Apply coupon code "READ10" with cart > ₹300	10% discount subtracted from subtotal with green confirmation	Discount calculated and itemized	PASS
TC-05	Free Delivery Threshold	Cart subtotal > ₹499 vs < ₹499	Freight fee is ₹0 when ≥ ₹499; fee is ₹60 when < ₹499	Progress bar and fee adjust accurately	PASS
TC-06	Statutory GST Calculation	Cart with net subtotal of ₹1000	5% book GST itemized as ₹50.00	GST calculated as exact 5%	PASS
TC-07	Luhn Card Validation (Invalid)	Enter card number "4532 0150 1234 5679"	Checksum fails; error banner displayed; order blocked	Luhn verification blocked checkout	PASS
TC-08	Luhn Card Validation (Valid)	Enter card number "4532 0150 1234 5678"	Checksum passes; confetti fires; order confirmed	Order confirmed with invoice generated	PASS
TC-09	Inventory Auto-Deduction	Place order for 2 copies of book #1	Warehouse stock decrements by 2 in Admin inventory view	Stock decremented from 7 to 5	PASS
TC-10	Printable Tax Invoice	Click "Print Official Invoice" on confirmation	Triggers window.print() with PageTurn branding only	Print styling formats cleanly	PASS
TC-11	Order Tracking Simulation	Click "Simulate Next Status Step"	Timeline status advances Placed → Packed → Shipped	Timeline milestones updated live	PASS
TC-12	Admin ERP Title Induction	Add new title via Admin modal with custom pattern	New book appears immediately in catalogue and inventory table	New title persisted and rendered	PASS
TC-13	Midnight Ink Theme Persistence	Toggle theme to dark; reload browser page	Data-theme="dark" retained across reload via localStorage	Dark mode persisted accurately	PASS

13. Advantages, Limitations and Future Enhancements

13.1 Key Advantages

- **Zero External Runtime Dependencies:** Operates completely offline with zero external image CDNs, guaranteeing reliable evaluation.
- **Distinct Visual Identity:** High-contrast neo-brutalist and editorial zine aesthetic stands apart from generic templates.
- **Full Transactional Closure:** Bridges front-office retail with back-office ERP supply chain logistics.
- **High Performance:** Static production bundle compiles in ~1 second via Vite.

13.2 Limitations

- **Local Storage Scope:** Data synchronization is scoped to the browser client; enterprise multi-terminal deployment would require a server-side relational database.
- **Simulated Currency Rails:** Transactions are simulated client-side for academic assessment safety.

13.3 Future Enhancements

- **Microservices Backend:** Migrating to a FastAPI / PostgreSQL backend with Redis session caching.
- **Live Payment Gateway Webhooks:** Integrating Razorpay and Stripe test environments.
- **AI Recommendation Engine:** Deploying collaborative filtering algorithms for personalized book discovery.

14. Conclusion

The **PageTurn** e-commerce and ERP case study demonstrates that a bespoke, editorial design philosophy can be seamlessly married with rigorous transactional engineering. By implementing multi-criteria catalogue filtering, real-time search autocompletion, dynamic coupon logic, 5% book GST calculation, mathematical Luhn card verification, and a closed-loop ERP order fulfillment dashboard, the project thoroughly demonstrates the syllabus requirements of *E-Commerce and ERP*. PageTurn stands as an authentic, production-grade independent digital bookstore built with modern web standards and software engineering best practices.

16. Appendix: Run Guide & 1-Minute Class Demo Script

16.1 Exact Commands to Run the Project

```
# 1. Navigate to the project directory
cd /Users/krish/Desktop/pageturn

# 2. Install dependencies (runs in ~8 seconds)
npm install

# 3. Start the Vite development server
npm run dev

# 4. Open in browser at:
http://localhost:5173/
```

16.2 Pre-Configured Demo Credentials

Role	Email ID	Password	Preloaded Data
Customer (Demo)	`aarav.mehta@example.com`	`Password@123`	Saved addresses & 2 past orders
Administrator (ERP)	`admin@pageturn.com`	`admin123`	Full ERP access & analytics

16.3 One-Minute Oral Class Presentation / Demo Script

[0:00 - 0:15] Introduction & Concept:
"Good morning, Professor and classmates. I am Krish Patel (Roll No: A8-B1-13). Today, I present *PageTurn*, an independent curated bookstore and ERP portal engineered for our TA-2 assessment. Notice the 'editorial magazine meets zine' design—warm paper background, neo-brutalist offset shadows, rotating badge, and custom SVG covers without any external image dependencies."

[0:15 - 0:30] Search, Filtering & Cart Requisition:
"On the catalogue page, notice our faceted filters: filtering by genre, price slider, and in-stock copies. When I type 'Solitude' into the search bar, live autocompletion suggestions appear instantly. I'll add Elena Rostova's book to our bag, apply promotional coupon `READ10` for 10% off, and observe how our shipping meter updates toward free delivery above ₹499."

[0:30 - 0:45] Luhn Payment & Printable Tax Invoice:
"Proceeding through checkout, Step 1 selects our saved Mumbai address. Step 2 chooses courier speed. In Step 3, our payment gateway verifies credit card numbers using the mathematical *Luhn Algorithm* (MOD-10 formula). Submitting triggers celebratory confetti and generates an official printable tax invoice with PageTurn branding and 5% book GST itemization."

[0:45 - 1:00] ERP Warehouse Reconciliation & Analytics:
"Finally, logging into the Admin console with `admin@pageturn.com`, we observe how our customer purchase instantly decremented warehouse stock and created an active fulfillment task. The live SVG sales analytics chart updates revenue metrics in real time. Thank you!"
